

**Amendments to the Specification**

Please replace the second full paragraph on page 6 with the following amended paragraph:

It is preferred that the pressure sensitive adhesive coating 18 on the lower surface 16 of the transparent ply 12 be pattern-coated such that area 61 beneath the elongated wristband central portion 34 is free of adhesive. It is even more preferred that the adhesive 18 be limited to the end tabs 62 and 64 at opposite ends of the wristband 30. It will be appreciated that, as a result, adhesive material will not adhere directly to the patient's skin when the wristband 30 is wrapped around the patient's wrist.
